Conditional Orders And Trailing Stop

A trailing stop order is a conditional order that uses a trailing amount, rather than a specifically stated stop price, to determine when to submit a market order. The trailing amount, designated in either points or percentages, then follows (or “trails”) a stock’s price as it moves up (for sell orders) or down (for buy orders).

Trailing Stop Orders: Mastering Order Types | Charles Schwab

A conditional order allows you to set order triggers for stocks and options based on the price movement of stocks, indexes, or options contracts. There are 5 types: contingent, multi-contingent, one-triggers-the-other (OTO), one-cancels-the-other (OCO), and one-triggers-a-one-cancels-the-other (OTOCO).
