Histopathology of Blistering Diseases: With Clinical ...

In autoimmune blistering disorders, your system mistakes healthy cells in your skin and mucous membranes for unwanted intruders. Your immune system makes proteins called antibodies. These attack...

Autoimmune Blistering Disorders: Symptoms, Causes, Treatment

Bullous pemphigoid (BUL-us PEM-fih-goid) is a rare skin condition that causes large, fluid-filled blisters. They develop on areas of skin that often flex — such as the lower abdomen, upper thighs or armpits. Bullous pemphigoid is most common in older adults.

Bullous pemphigoid - Symptoms and causes - Mayo Clinic

Inherited blistering diseases Epidermolysis bullosa (EB) refers to a group of inherited disorders in which there are mutations in specific keratin proteins (EB simplex), hemidesmosomes (junctional EB), anchoring filaments or type VII collagen (dystrophic EB).

Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) is the cause of an ongoing pandemic, with increasing deaths worldwide. To date, documentation of the histopathological features in fatal cases of the disease caused by SARS-CoV-2 (COVID-19) has been scarce due to sparse autopsy performance and incomplete organ sampling.

Histopathology and ultrastructural findings of fatal COVID ...

Pemphigoid is a group of rare autoimmune blistering diseases of the skin, and mucous membranes. As its name indicates, pemphigoid is similar in general appearance to pemphigus, but, unlike pemphigus, pemphigoid does not feature acantholysis, a loss of connections between skin cells.

Pemphigoid - Wikipedia

Histologic Findings The friction blister forms with a split in the stratum spinosum. Midepidermal necrosis is evident. The blister roof consists of normal and necrotic keratinocytes; the blister...

Friction Blisters Workup: Histologic Findings

APLAID patients present with early-onset recurrent attacks of blistering skin lesions, eye inflammation with ocular hypertension, inflammatory bowel disease, arthralgia, and sinopulmonary infections caused by a mild humoral immunodeficiency.

Dermatologic and Dermatopathologic Features of Monogenic ...

Acute blistering diseases can be generalised or localised to one body site and are due to infection or inflammatory disorders. Although most commonly eczematous, generalised acute blistering diseases can be life-threatening and often necessitate hospitalisation.

Blistering skin conditions | DermNet NZ

Inflammatory bowel disease (IBD) is a common disorder of ferrets (*Mustela putorius furo*) that may progress to lymphoma. Although routine histology is used to distinguish between these diseases, misclassifications may occur. Immunohistochemistry (IHC) is commonly used to distinguish between IBD and l ...
