Consequently, two main trends of evolution appear today in small ruminant production: "Passive extensification" in areas where animal production is tending to become the sole agricultural activity. The territory under management is becoming increasingly larger while the population is decreasing.

small ruminant production in the developing countries

Total meat production per capita seems on the verge of a continued decline. Food production is barely keeping up with population growth. Per capita cereal production is levelling off and will likely decline until farm prices increase drastically. Then less and less meat will be produced from grain and less meat will be consumed at higher cost.

small ruminant production in the developing countries

During 2009, a case study to analyse the small ruminants industry using the Agricultural Science Technology and Innovation Systems (ASTI) methodology was initiated in Trinidad & Tobago. This was part of a larger regional study designed to identify and characterize (i) the innovation system in which the regional small ruminants industry is functioning, (ii) critical constraints which prevent the ...
