for the variables for which both sides of the equation are defined.

Conditional

trigonometric

equations are true for only some replacement

values. Solutions in a specific interval, such

as $0 \leq x \leq 2\pi$, are

usually called primary

solutions. A general

solution is a formula

that names all possible

solutions.

A trigonometric identity is an equation involving trigonometric functions that can be solved by any angle.

Trigonometric identities have less to do with evaluating functions at specific angles than they have to do with relationships between functions.

Eight specific trigonometric identities are fundamental.
